1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Balkanski show producing a solid state battery of interest; the production of a solid electrolyte using a Li source and a P source is disclosed by the patent to Takeuchi et al. and Bretkopf et al. describe an atmospheric pressure chemical vapor deposition grown lithium ion conducting electrolyte.

2. The following is an examiner's statement of reasons for allowance: none of the prior art of record teach the method for producing a solid electrolyte thin film comprising providing a plasma source that is coupled to a plasma gas so that a plasma stream is directed to a substrate, vaporizing a lithium precursor, vaporizing a phosphate precursor and then transporting both of the precursors to the plasma source, expelling both of the precursors from the plasma source and into the plasma stream so that both precursors do not mix with the plasma gas before the gas is expelled as the plasma stream. The art does not disclose the above steps of vaporizing the two precursors and then combining the same with the plasma stream which results in the formation of a solid electrolyte thin film.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John S. Maples whose telephone number is 571-272-1287. The examiner can normally be reached on Monday-Thursday from 6:15-3:45.
